

Phase 8: Project Demonstration

AI Comic Story Creator — SmartBridge Project Submission

1. Demo Flow

- 1. Introduce the problem and the multi-agent architecture (30-60 sec).
- 2. Submit a sample premise (e.g. 'A sci-fi detective discovers an ancient artifact on Mars') with a page count.
- 3. Show the generated JSON script (title, characters, pages, panels, dialogue).
- 4. Show the character visual anchor descriptor generated for the lead character.
- 5. Show 2-3 rendered panels demonstrating the character staying visually consistent.
- 6. Show the composited page with dialogue bubbles placed correctly.
- 7. Show the final exported PDF/CBZ output.
- 8. Close with limitations, cost/latency notes, and possible next steps.

2. Presentation Tips

- Have a pre-generated backup issue ready in case live generation is slow or hits rate limits.
- Highlight the character-consistency mechanism specifically — it's the project's key differentiator.
- Be ready to explain the JSON schema design decision (why structured output instead of free text).

3. Suggested Evaluation Criteria to Anticipate

- Does the generated script make narrative sense (inciting incident, rising action, climax, resolution)?
- Does the character remain visually recognizable across panels?
- Is the panel layout correctly calculated and non-overlapping?
- Does the export produce a usable, correctly formatted PDF/CBZ file?
